create_invisible_anchor	4
describe_using	5
make_skiplinks	6
make_tabable	7

Index	8
--------------	----------

add_description	<i>Add a description to an HTML element</i>
-----------------	---

Description

Add a description to an HTML element

Usage

```
add_description(element, descID, description, visible = FALSE)
```

Arguments

element	an HTML element to describe
descID	the ID of the div that will describe the HTML element
description	the description of the HTML element
visible	should the description be visible ? Defaults to FALSE

Value

an HTML element with a description attached to it

Examples

```
if (interactive()) {
  ui <- fluidPage(
    h2("Using a screen reader
      hit <Tab> or <Shift + Tab> to
      navigate between the buttons
      and stop at button 5 to see the difference"),

    actionButton(
      inputId = "inp1",
      label = "button 1"
    ),
    actionButton(
      inputId = "inp2",
      label = "button 2"
    ),
    actionButton(
      inputId = "inp3",
      label = "button 3"
    ),
    actionButton(
      inputId = "inp4",
      label = "button 4"
    ),
  )
}
```

```
  actionButton(
    inputId = "inp5",
    label = "button 5"
  ) %>%
  add_description(
    description = "hello this is a button
                  when you click it you'll have a
                  thing, when you don't click it you'll
                  have another thing",
    descID = "chkoup"
  )
)

server <- function(input, output, session) {}

shinyApp(ui, server)
}
```

check_contrast

Color Contrast Accessibility Report

Description

returns a report from the Contrast Checker API about color contrast for accessibility

Usage

```
check_contrast(fg_col, bg_col)
```

Arguments

fg_col	the Foreground Color
bg_col	the Background Color

Value

Color Contrast Report

Examples

```
check_contrast(fg_col = "#21EA06", bg_col = "#483D3D")
```

check_contrast_raw *Color Contrast Accessibility Report in a Raw Format*

Description

returns a report from the Contrast Checker API about color contrast for accessibility in a list format so that the information provided can be extracted and piped into other functions.

Usage

```
check_contrast_raw(fg_col, bg_col)
```

Arguments

fg_col	the Foreground Color
bg_col	the Background Color

Value

Color Contrast Report in a raw format

Examples

```
check_contrast_raw(fg_col = "#21EA06", bg_col = "#483D3D")
```

create_invisible_anchor
Create an HTML invisible anchor

Description

Make an element invisible so that it can only be read by screen readers

Usage

```
create_invisible_anchor(id, text, href = NULL)
```

Arguments

id	id of the anchor
text	text of the anchor
href	of the anchor. Defaults to NULL.

Value

an invisible HTML anchor element

describe_using	<i>Describe an HTML element by another one</i>
----------------	--

Description

Describe an HTML element by another one

Usage

```
describe_using(element, descID)
```

Arguments

element	the HTML element to describe
descID	one or a vector of many HTML elements' <IDs> that will be used to describe the 'element' parameter

Value

an HTML element described by another HTML element

Examples

```
if (interactive()) {
  ui <- fluidPage(
    h2("Using a screen reader
       hit Tab and Shift + Tab to
       navigate between the buttons
       and stop at button 2 to see the difference"),

    div(
      id = "paragraph",
      p("The following paragraph tag will be used as a descriptor")
    ),

    actionButton(
      inputId = "inp1",
      label = "button 1"
    ),
    actionButton(
      inputId = "inp2",
      label = "button 2"
    ) %>%
    describe_using(
      descID = "paragraph"
    )
}
```

```
)  
server <- function(input, output, session) {}  
shinyApp(ui, server)  
}
```

make_skiplinks*Transform an HTML element to a Skip Link*

Description

Transform an HTML element to a Skip Link

Usage

```
make_skiplinks(element, skip_to, bg_color = "#002240", col = "#FFFFFF")
```

Arguments

element	the element to use as a Skip Link
skip_to	the HTML element to skip to
bg_color	the background color of the element to use as a Skip Link
col	the color of the element to use as a Skip Link

Value

a Skip Link HTML element

Examples

```
if (interactive()) {  
  ui <- fluidPage(  
    tags$a("do you want to be redirected to google.com ?",  
          id = "skip-link"  
    ) %>%  
    make_skiplinks(  
      skip_to = "https://google.com",  
      bg_color = "red",  
      col = "white"  
    ),  
    h1("accessibility is not a detail")  
  )  
  server <- function(input, output, session) {}  
  shinyApp(ui, server)  
}
```

make_tabable	<i>Make HTML elements tabable</i>
--------------	-----------------------------------

Description

Make HTML elements tabable

Usage

```
make_tabable(element, tab_index = 0)
```

Arguments

element	the HTML element to be tabable (if not by default)
tab_index	takes either 0, a negative or a positive value according to the required state of the element. 0 will make the element tabable with its relative order defined by the platform convention. a negative value will make the element untabable. a positive value will make the element tabable and its relative order defined by the provided value.

Value

a tabable HTML element

Examples

```
if (interactive()) {  
  ui <- fluidPage(  
    textInput(inputId = "inp1", label = "input"),  
  
    div(h1("Not tabable")) %>%  
      make_tabable(tab_index = -1),  
    div(h2("Tabable ! with priority")) %>%  
      make_tabable(tab_index = 1),  
    div(h2("Simply Tabable")) %>%  
      make_tabable(tab_index = 0)  
  )  
  
  server <- function(input, output, session) {}  
  
  shinyApp(ui = ui, server = server)  
}
```
